

ABSTRACT

The present invention provides a conductive plastic composition comprising: (I) a copolymer comprising the styrene block and the conjugated diene block; (II) a copolymer comprising the styrene block and the acrylate type block; and (III) carbon black; said composition containing
5 from 0.1 to 50 parts by weight of the copolymer (II) comprising the styrene block and the acrylate type block per 100 parts by weight of the copolymer (I) comprising the styrene block and the conjugated diene block; and from 5 to 50 parts by weight of the carbon black (III) per 100 parts by weight of
10 the copolymer (I) comprising the styrene block and the conjugated diene block.
